ABSTRACT

The present invention relates to a system and methodology associated with providing a flexible unified view of key performance indicators (KPIs). Retrieving KPI values from a store is not always trivial and may require submitting multiple queries to in order to obtain desired results. The present system and method makes it easier for front-end applications to access and display KPIs in an easily customizable form. Furthermore, third parties can leverage off the provided architecture in connection with their own applications to facilitate quick and easy access to a single view of performance indicators.
